Cover story: Red Hot reviews

AV Candy has developed an entirely new arm to its business thanks to one of its most unlikely projects – fitting a 69ft canal boat with a state-of-the-art broadband, satellite television and audio system. Large components such as the TVs, antenna mounts and in-motion satellite tracking system were all fitted while the boat was in dry dock, while the rack equipment was installed while the boat was moored along the Grand Union Canal.

Company director Simon Redfearn explained why the project was a significant one for the business. He said: "Although the job was a challenge, it was a hugely enjoyable experience and we learnt an awful lot. Not least that people who live in or on mobile vehicles have very specific requirements. As a result of this project we embarked on an intensive programme of research and development

■ Audio visual company AV Candy has developed an entirely new arm to its business thanks to one of its most unlikely projects – fitting a 69ft canal boat with a state-of-the-art broadband, satellite television and audio system. Large components such as the TVs, antenna mounts and in-motion satellite tracking system were all fitted while the boat was in dry dock, while the rack equipment was installed while the boat was moored along the Grand Union Canal.

Motor homes and caravans

Company director Simon Redfearn explained why the project was a significant one for the business. He said: "Although the job was a challenge, it was a hugely enjoyable experience and we learnt an awful lot. Not least that people who live in or on mobile vehicles have very specific requirements. As a result of this project we embarked on an intensive programme of research and development

Space-saving satellite system

to create ways to connect to the internet that aren't compromised by the movement of vehicles and the process of travelling.

"Since this first job we've worked on a number of other projects, and along with motor homes and caravans, it's now a sector we're targeting more seriously."

Company director Simon Redfearn explained why the project was a significant one for the business. He said: "Although the job was a challenge, it was a hugely enjoyable experience and we learnt an awful lot. Not least that people who live in or on mobile vehicles have very specific requirements.
